EDUCATION

B.Tech — Computer Science Engg.
Swami Keshvanand Institute of Technology, Jaipur
CGPA: 9.3 / 10.0
Class XII: 95% | Class X: 92%

TECHNICAL SKILLS

Languages: Python, C++
ML / AI: Classification, Regression, Feature Engineering, Domain Prediction
Libraries: scikit-learn, pandas, NumPy, Matplotlib
NLP: TF-IDF Vectorisation, Keyword & Skill Extraction, Text Parsing
Deployment: Streamlit, Git, GitHub
Core CS: DSA, OOP, Problem Solving
Learning: NLP, OpenCV

CODING PROFILES

- LeetCode — 2000+ problems
- GeeksforGeeks — 150+ problems

Strong coverage of graphs, arrays, linked lists & dynamic programming

ACHIEVEMENTS

- 200+ DSA problems solved across LeetCode & GFG
- 86% accuracy on Bulldozer Price Prediction
- 0.94 recall on Credit Risk classifier
- ROC-AUC validated Telecom Churn model
- Built AI Resume Analyzer with domain prediction & skill-gap detection

CAREER OBJECTIVE

Results-oriented CS undergraduate with a 9.3 CGPA and hands-on experience building end-to-end ML pipelines and AI-powered applications. Proficient in Python, scikit-learn, NLP, and Streamlit deployment. Built 4 projects spanning credit risk, price prediction, churn analysis, and an AI-powered resume analyzer with domain prediction and skill-gap detection. Eager to bring strong DSA foundations and ML expertise to a Software Engineering / ML role to solve problems at scale.

PROJECTS

Credit Risk Prediction Model

Python | Logistic Regression | scikit-learn | Streamlit | pandas

- Engineered a Logistic Regression classifier achieving 79% accuracy and 0.94 recall — minimising false negatives critical for real-world credit decisions.
- Applied feature engineering, data preprocessing, and threshold tuning to maximise classification reliability on imbalanced financial data.
- Deployed end-to-end via a Streamlit web app enabling real-time credit risk predictions for non-technical users.
- Published on GitHub with clean documentation demonstrating full ML pipeline ownership.

Bulldozer Price Prediction Model

Python | Random Forest | Feature Engineering | Hyperparameter Tuning | Streamlit

- Built a Random Forest regression model on large auction datasets to predict heavy equipment prices.
- Achieved 86% accuracy through systematic feature engineering, categorical encoding, and hyperparameter optimisation via GridSearchCV.
- Validated model using RMSLE metric to minimise relative error across diverse price ranges.
- Built an interactive Streamlit interface for real-time price predictions accessible to end users.

Telecom Customer Churn Prediction

Python | Random Forest | Label Encoding | One-Hot Encoding | ROC-AUC | scikit-learn

- Built a Random Forest classifier (200 estimators, max_depth=8) on the Telco Customer Churn dataset to predict customer attrition.
- Engineered features via Label Encoding and One-Hot Encoding across 19 categorical variables; handled missing TotalCharges via coercion.
- Achieved strong generalisation with 5-fold cross-validated ROC-AUC score, validated via confusion matrix and classification report.
- Plotted ROC Curve using RocCurveDisplay; compared train vs. test AUC to diagnose overfitting and ensure production-grade reliability.

AI Resume Analyzer

Python | NLP | Skill Extraction | Domain Classification | scikit-learn | Streamlit

- Built an AI-powered resume analyzer that parses uploaded resumes and extracts skills using NLP-based text processing and keyword/entity extraction.
- Trained a classification model to predict the most relevant job domain (e.g., Data Science, Web Development, ML Engineering) from the extracted skill set.
- Mapped predicted domains to associated job roles and their required skill sets, then computed skill-gap analysis by comparing extracted vs. required skills.
- Built an interactive Streamlit interface displaying extracted skills, predicted domain, matched job roles, and a personalised missing-skills report to guide upskilling.

SKILLS SUMMARY

Programming: Python, C++
ML / AI: Classification, Regression, Feature Engineering, Domain Prediction, Model Evaluation (Accuracy, Recall, F1, ROC-AUC, RMSLE)
Libraries: scikit-learn, pandas, NumPy, Matplotlib, TF-IDF
Deployment: Streamlit, Git, GitHub, Jupyter, VS Code
NLP / AI: Skill Extraction, Domain Classification, Keyword & Entity Extraction, TF-IDF Vectorisation
Core CS: Data Structures & Algorithms, OOP, Problem Solving
Currently Learning: NLP (advanced), Computer Vision (OpenCV)

COMPETITIVE PROGRAMMING

Solved 200+ DSA problems across LeetCode and GeeksforGeeks with strong coverage of graphs, arrays, linked lists, recursion, and dynamic programming — directly aligned with Google's technical interview requirements.
